Alchemical articles archive project

Over the past five years the Alchemy research library has grown considerably and now amounts to over 1850 books and articles in various languages. Due to the generosity of many authors, publishers and fellow researchers, this library has become a substantial collection of modern, i.e. 20th century works, complementing the two important collections of early alchemical books, the Ferguson and Young collections, here in Glasgow. I also have made a considerable collection of iconography from printed books and manuscripts on alchemy.

All this material constitutes a resource for scholars and others interested in researching the literature of alchemy, brought together into one place, Glasgow. You can see the most recent update of the alchemy research library at reslib.html

I have begun to systematically collect photocopies of scholarly articles in journals. At present I have over 750 items and now need people in other countries with access to good libraries to make photocopies of articles for this collection. Anyone with ready access to a major library with good collections of journals who is willing to help with this project please get in touch with me directly and I will try to sort out what needs to be done. Although I have access to many of the journals here in Glasgow there are many that will only be available in the USA or in Germany, France, or other continental European countries. If you are willing and able to help please get in touch. [e-mail](mailto:adam@alchemywebsite.com) - Adam McLean
